PRESENTATION EQUIPMENT SERVICES

Next-Generation Poster Printers

For decades, it has been easy to make two-color poster-size enlargements of your originals using Minnesota Western/MCSi Chart Printers or Varitronics poster printers. There were limitations, however:

- Supplies were costly
- Only certain expensive materials could be laminated
- Only two colors were available
- Supply rolls had to be changed in order to change colors

All of that has changed. Now it's even easier to make poster-size visuals and flip charts, and you can do it in **full-color!**

No more cluttering up your workroom with rolls of poster paper in various color combinations. No more changing of paper every time you want to print in a different color. Plus, the supply cost per poster is lower, and all of your posters can be laminated. You can even print posters on photo paper up to 42 inches wide.

Some of the advantages are:

- Easy to use
- Lower supply cost
- Fast printing speed
- High print quality (easier to read)
- Posters can be laminated
- Print from originals or from computer
- Various types of paper available
- Lower cost than comparable one-color printers
